# 1. Introduction

# 1.1. Technological Requirements:

Java JDK <a href="https://www.oracle.com/java/technologies/downloads/">https://www.oracle.com/java/technologies/downloads/</a>

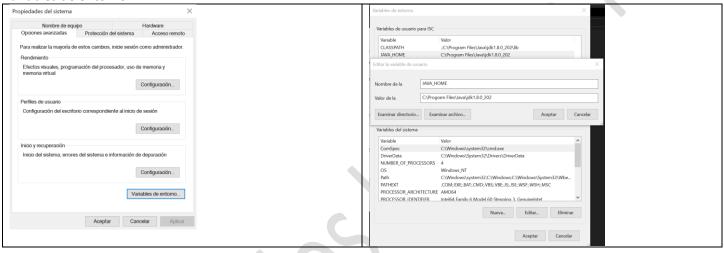

VS Code https://code.visualstudio.com/Download

Extensions: Extension Pack for Java

Integrated Development Environment (IDE)

Eclipse IDE: <a href="https://www.eclipse.org/downloads/packages/">https://www.eclipse.org/downloads/packages/</a>
NetBeans IDE <a href="https://netbeans.apache.org/download/index.html">https://netbeans.apache.org/download/index.html</a>

#### Variables de entorno

Panel de control -> Sistema -> Configuracion avanzada del sistema Opciones avanzadas -> Variables de entorno -> Variables de Usuario

JAVA\_HOME
C:\Program Files\Java\jdk1.8.0\_202

PATH
%JAVA\_HOME%\BIN

CLASSPATH
.; %JAVA\_HOME%\LIB

C:\>java -version (correr)
C:\>javac -version (compilar)

```
C:\dev>java -version
java version "1.8.0_202"

C:\dev>javac -version
javac 1.8.0_202

C:\dev\poo>javac Hola.java

C:\dev\poo>java Hola
Hello World!

public class Hola {

public static void main(String[] args) {

    System.out.println("Hello World!");

}

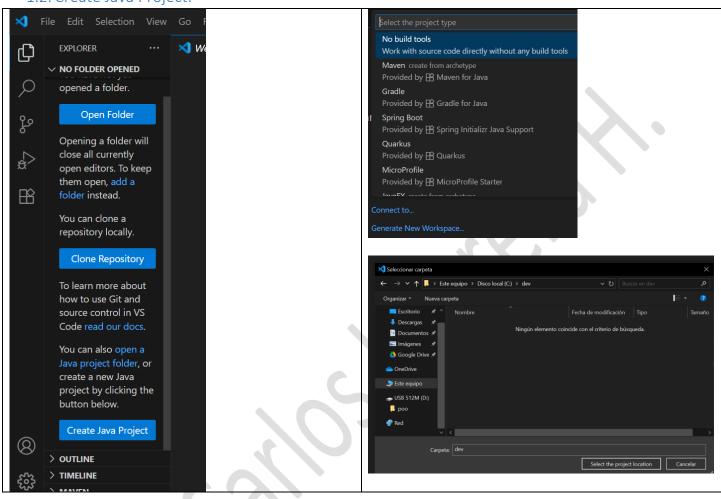

C:\dev\poo>javac Hola.java
```

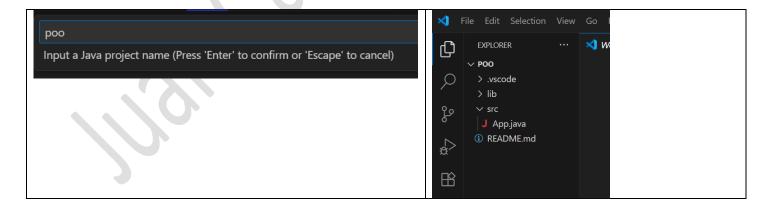

Java Foundations 170-811

jdk-8u202-windows-x64.exe

VSCodeSetup-x64-1.103.2.exe

#### 1.2. Create Java Project:

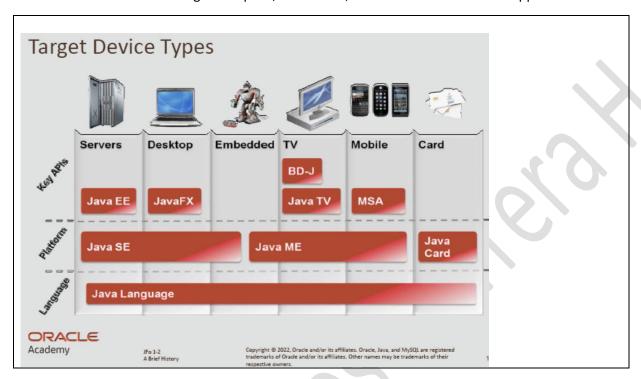

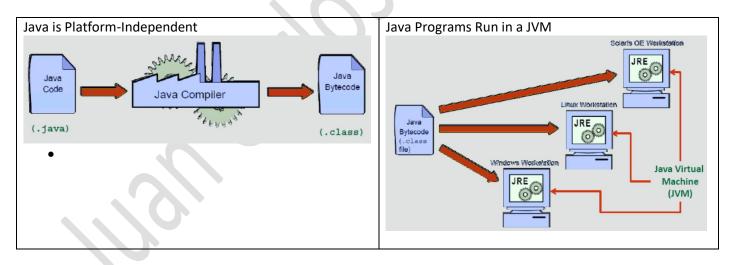

#### 1.3. Setting Up Java

James Gosling is considered the "Father of Java". Duke, the Java Mascot.

Oracle acquired Sun Microsystems in 2010, and released JDK 7 in 2011, and JDK 8 in 2014.

Jakarta EE Is used to create large enterprise, server-side, and client-side distributed applications

Java Runtime Environment (JRE) Includes:

- The Java Virtual Machine (JVM)
- Java class libraries

#### Purpose:

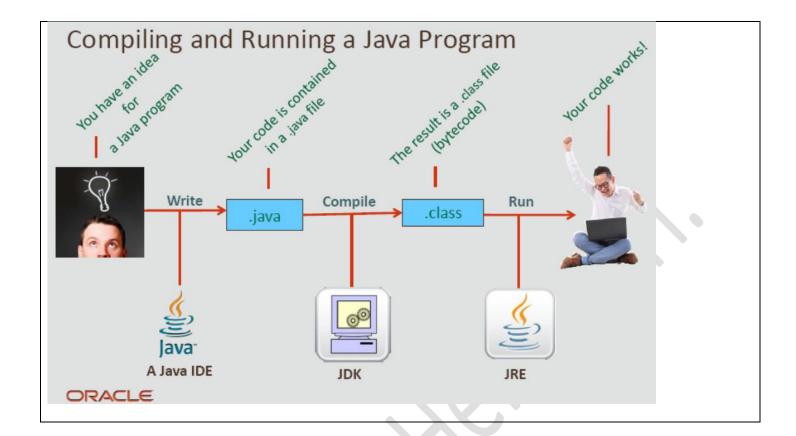

- Read bytecode (.class)
- Run the same bytecode anywhere with a JVM

Java Development Kit (JDK)

- Includes:
  - JRE Java Compiler
  - Additional tools

#### Purpose:

Compile bytecode (.java 2.class)

A Java IDE is used to write source code (.java)

The JDK compiles bytecode (.java → .class)

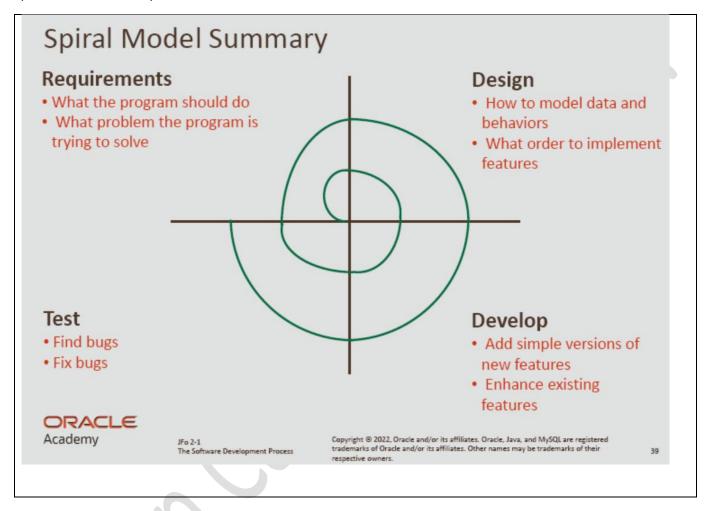

Bytecode runs in a JVM, which is part of the JRE

 $\rightarrow$ 

# 2. Java Basics

# 2.1. The Software Development Process

#### Spiral Model of Development

https://objectstorage.uk-london-1.oraclecloud.com/n/Irvrlgaqj8dd/b/Games/o/JavaPuzzleBall/index.html

 $\rightarrow$ 

# 2.2. What is my Program Doing?

Code within curly braces is called a block of code Indentation before a line of code (4 spaces)

Whitespace
End statements with semicolons (;)

// Single-line comments

Multi-line comments

/\* Bievenidos
a poo
\*/

### 2.3. Introduction to Object-Oriented Programming Concepts

#### Procedural languages ...

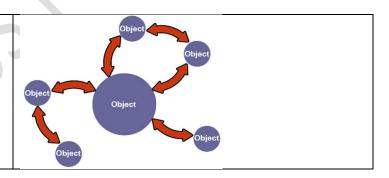

- Read one line at a time
- The C language is procedural

#### Object-oriented languages...

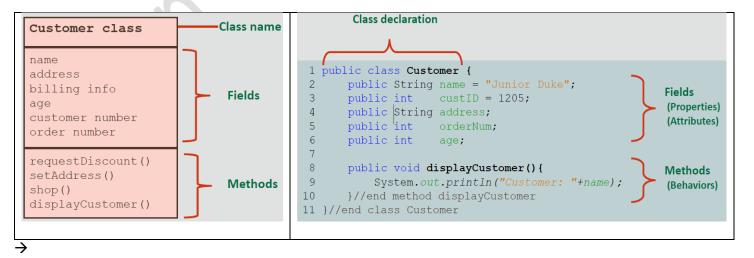

- · Read one line at a time
- Model objects through code
- Emphasize object interaction
- Allow interaction without a prescribed order
- Java and C++ are object-oriented languages

# **Object-Oriented Programming**

- Interaction of objects
- No prescribed sequence

#### **Modeling Properties and Behaviors**

# 3. Java Data Types

#### 3.1. What is a Variable?

String x = "Sam"; System.out.println("My name is " + x);

Variables03.java (There are 6 mistakes)

Туре	Keyword	Example Values	
Boolean	boolean	true, false	
Integer	int	1, -10, 20000, 123_456_789	
Double	double	1.0, -10.0005, 3.141	
String	String	"Alex", "I ate too much dinner."	

# **Variable Naming Conventions**

- Begin each variable with a lowercase letter
- Subsequent words should be capitalized: myVariable
- Choose names that are mnemonic and that indicate the intent of the variable to the casual observer
- Remember that ...
- Names are case-sensitive
- Names can't include white space

Int studentAge = 20;

String myCatchPhrase = "Enjoy Alex Appreciation Day!";

#### 3.2. Numeric Data

**Integral Primitive Types** 

Туре	Length	Number of Possible Values	Minimum Value	Maximum Value
Byte	8 bits	2 <sup>8</sup> , or 256	-2 <sup>7</sup> , or -128	2 <sup>7</sup> –1, or 127
short	16 bits	2 <sup>16</sup> , or 65,535	-2 <sup>15</sup> , or -32,768	2 <sup>15</sup> –1, or 32,767
int	32 bits	2 <sup>32</sup> ,or 4,294,967,296	-2 <sup>31</sup> , or -2,147,483,648	2 <sup>31</sup> –1, or 2,147,483,647
long	64 bits	2 <sup>64</sup> , or 18,446,744,073,709,551 ,616	-2 <sup>63</sup> , or -9,223,372,036, 854,775,808L	2 <sup>63</sup> –1, or 9,223,372,036, 854,775,807L

+= -= \*= /= %= ++ -- Pre/Post a+=b a = a + (b)

#### Floating Point Primitive Types

Туре	Float Length	When will I use this?
float	32 bits	Never
double	64 bits	Often

double 
$$x = 9/2$$
; double  $x = 9/2.0$ ;

final double PI = 3.141592;

#### Rules of Precedence

- Operators within a pair of parentheses
- Increment and decrement operators (++or --)
- Multiplication and division operators, evaluated from left to right
- Addition and subtraction operators, evaluated from left to right
- If operators of the same precedence appear successively, the operators are evaluated from left to right

int 
$$x = (((25 -5) * 4) / (2 -10)) + 4;$$

# 3.3. Textual Data

Use the char data type
Use Strings
Concatenate Strings
Understand escape sequences
Understand print statements better

Char is used for a single character (16 bits)	A String can handle multiple characters
char shirtSize= 'M';	String greeting = "Hello World!";

#### Primitives

Туре	Length	Data
boolean	1 bit	true / false
byte	8 bits	Integers
short	16 bits	Integers
int	32 bits	Integers
long	64 bits	Integers
float	32 bits	Floating point numbers
double	64 bits	Floating point numbers
char	16 bits	Single characters

# Where are Strings?

# String is capitalized

- Strings are an object, not a primitive
- Object types are capitalized by convention

Combining multiple Strings is called concatenation

String totalPrice = "Total: \$" +3 +2 +1; String totalPrice = 3 +2 + 1 + "Total: \$"; String totalPrice = "Total: \$" +(3 +2 +1);

### Escape Sequence

Escape Sequence	Description
\t	Insert a new tab
\b	Insert a backspace
\n	Insert a new line
\r	Insert a carriage return
\f	Insert a formfeed
\'	Insert a single quote character
\"	Insert a double quote character
\\	Insert a backslash character

sout tab "Metodo abreviado"
